**PRACTICAL NUMBER: 7C**

Aim: Demonstrate the following activities in UiPath:
   i.   Mouse (click, double click and hover)
   ii.  Type into
   iii. Type Secure text

Steps:

1) Create a flowchart activity.
2) Drag and drag a sequence activity from activities panel.
3) Connect the start node to this sequence
4) Drag and drop the double click activity and indicate the folder icon to open it.
5) Drag and drop another double click activity and indicate the Login page to open it in browser.
6) Drag and drop type into activity and indicate the text area of username in the page and pass the value in double quotes.

7) Drag and drop the type secure text activity.
8) Create a variable pwd with data type as SecureString and provide the value using Net package and convert it into SecureString and pass this value in SecureText of the input of type secure text.
9) Drag and drop the hover button to point at Submit button.
10) Drag and drop another click button and indicate it on the submit button.

| Name | Variable type | Scope | Default |
|------|---------------|-------|---------|
| pwd | SecureString | Sequence | new System.Net.NetworkCredential("","prerana").SecurePassword |
| Create Variable | | | |

Output:

Username: Prerana

Password: prerana
